Christmas Day - Closed
Dec. 26th - Closed
New Years Eve 9am-4pm
New Years Day - Closed
Jan. 2nd - Closed

WE ARE IN NEED OF MEDIUM SIZED COOLERS PLEASE RETURN ANY COOLERS YOU ARE NOT USING!

Sampling Issues

Please use the proper bottles provided by GTA that contain the proper preservatives. GTA labels the bottles with what preservative is inside and what analysis it is for. It is critical that Nitrates/Nitrites/Ammonia/Phos are H2SO4 Preserved. **Do not mix with other preservatives, this can cause a significant shift in final concentrations.**

Methanol kits - Please be sure to clean the threads on the VOA vial before recapping soil particles in the threads can cause openings allowing either methanol to escape or contaminants to come in. Wipe the threads with a paper towel until all visible soil is gone.

Sample amounts - Because different labs do not always use the same method, minimum sample amounts required can vary. For instance, the state lab uses a different method for Nitrates/Nitrites then we do at GTA. Although either method is acceptable, we require much more sample. If you are not sure, please contact us to determine the minimum sample amounts needed.
